The Sensations Whirlpool system has been developed based on our Managing Director’s 26 years of experience of manufacturing, servicing and speaking to people who own whirlpool baths. The Sensations whirlpool has been designed to meet our very strict criteria in terms of Performance, Reliability, Hygiene and Functionality. Not all whirlpool baths are made the same – Pegasus Whirlpool Baths are setting new high standards with their Sensations system!

A Pegasus Sensations Whirlpool bath is a haven into which you can absorb yourself at the end of a long hard day and ease away aches & pains, stress & strains. We don’t want you to worry about it breaking down, we don’t want you to worry about what happens when the warranty expires, we want you to relax and enjoy your bath! For this reason we have incorporated as standard all the features which will allow this to happen. You don’t pay extra for a pop-up-waste, it comes as standard, you can even upgrade to a bath fill waste. You don’t pay extra for chromotherapy lighting, we provide four RGB lights as standard. Also as standard are eight whirlpool jets to massage your aching back, a further eight to massage those aching feet as well as four jets either side of the bath - a total of 24 venturi jets.

Performance: We have sourced high quality pumps and blowers from Europe to compliment our own 4th Generation Venturi and pipework. These power units are highly efficient in terms of energy and are carefully matched to our systems to provide natural and Turbo powered streams of aerated water into the bath.

Reliability: Built with quality components and electronics manufactured in the UK and Europe, the longevity of Pegasus Sensations whirlpool bath is assured. We hold a massive amount of spare parts, not only for our own systems, but for orphaned systems of our competitors too.

Hygiene: Working on the principle of what goes up must come down, the Sensations unique 4th Generation whirlpool pipework is designed so that the water is pumped upwards rather than along as in other systems. When the bath is emptied, the pump and pipework will drain completely, but just to make sure that every last drop has gone, the heated blower is programmed to automatically purge the pipework of any remaining droplets 20 minutes after you have emptied the bath. Maintenance consists of flushing the system with our whirlbath cleanser six or seven times a year depending on usage - we include a two month hygiene pack with every system.

Functionality: A great deal of thought has gone into the Sensations whirlpool system. We want your Pegasus Whirlpool Bath to be a haven where you can relax and enjoy all the benefits of Hydrotherapy, Chromotherapy and Aromatherapy. Starting with Hydrotherapy the unique Sensations touch sensitive glass control is designed to be installed into your tiles at the side of your bath in a position convenient for you to see and to operate. Water level sensing prevents the pump from being operated when no water is in the bath. The water level sensor is also used to send signals to the heated blower so that it purges the pipework after the bath has emptied. A Pegasus whirlpool bath is your very own hydrotherapy unit. Our Sensations system provides five massage systems: Whirlpool, Spa, a Combination of Whirlpool and Spa*, Turbo whirlpool and Hydropool* (Turbo Whirlpool and Spa) The four Chromotherapy lights allow you to select eleven different colours and five light programs. Finally, to complete the experience, we have a range of low foaming bath oils with at least 3% aromatherapy oils.

Turbo Sensations comprises 24 venturi jets in the sides of the bath and has two massage systems: Whirlpool and Turbo Whirlpool.

Hydro-Sensations as Turbo-Sensations, but with an additional 18 nozzles in the base of the bath which inject air into the water giving a buoyant effect and also adds a further three massage options: Spa, Combination Whirlpool & Spa, & Hydro-pool (Turbo Whirlpool and Spa)
Hygiene:

The Pegasus Sensations whirlpool system is designed with a unique 4th Generation pipework system that literally turns the whirlpool system upside down, pumping the water from underneath the bath and letting gravity take over. This process ensures that every last drop of water is drained naturally and effectively. Residual water clings to the pipes due to surface tension, but this is dried off by the heated blower set to purge the pipework with hot air 10 minutes after the water is emptied out of the bath. This automated purge process is essential for luxury whirlpool baths, especially when there are jets on the base of the bath. Consideration has also been given to the fact that baths are occasionally used without the whirlpool system being activated or used as a shower. In these instances, the purge sequence can be initiated manually.

Functionality:

A great deal of thought and ingenuity has gone into the Sensations whirlpool system. We want your Pegasus Whirlpool Bath to be a haven where you can relax and enjoy all the benefits of Hydrotherapy, Chromotherapy, and Aromatherapy from the comfort of your own bathroom. The unique Sensations touch-sensitive glass control is designed to be installed into your tiles at the side of your bath in a position convenient for you to see and to operate. A Pegasus whirlpool bath is your very own hydrotherapy unit. The Sensations system provides five massage options: Whirlpool, Spa, a Combination of Whirlpool and Spa, Turbo whirlpool, and Hydropool. The four Chromotherapy lights allow you to select eleven different colours and five light programs: Energy, Tonic, Relax, Sun, and Dream. Finally, to complete the experience, we have a range of low foaming bath oils with at least 3% aromatherapy oils.

Hygiene:

No Hiding Place: We have nothing to hide when it comes to hygiene and we are very proud of our unique 4th Generation pipework system. So proud in fact that we are more than happy to let you and our competitors inspect the design of our pipework before you buy. Simply go to www.pegasuswhirlpoolbaths.co.uk/sensations/ and there is a 360-degree image of one of our baths which is available for inspection. Not many people buy a car without looking under the bonnet!
